	F	0	0						DEPRESSIVE MOODS
	G	1	16						REALITY DISTORTIONS

CONFIDENTIAL INFORMATION FOR PROFESSIONAL USE ONLY

INTERPRETIVE CONSIDERATIONS

The scores in this report are based on normative data obtained from 9- to 12-year-olds who were being seen in professional treatment settings for family, academic, social, and/or emotional problems. Scores reported for respondents who inappropriately took the M-PACI inventory for other than such clinical purposes may be inaccurate. Further, owing to developmental fluctuations in emotion and behavior that are characteristic of this age group, this score report should be considered a "snapshot" of this child's emerging and changeable psychological patterns.

This report must be employed as only one aspect of a thorough clinical evaluation. It should not be shown directly to either the child or his family without prudent consideration and clinical discretion.

The child who completed this M-PACI inventory is an 11-year-old boy. He is in the 6th grade at school.

End of Report

NOTE: This and previous pages of this report contain trade secrets and are not to be released in response to requests under HIPAA (or any other data disclosure law that exempts trade secret information from release). Further, release in response to litigation discovery demands should be made only in accordance with your profession's ethical guidelines and under an appropriate protective order.
